

# Accessible smart products

**NEW: Smart lights - and more, without difficult technology**

**Smart products are becoming more and more popular, especially now voice assistants like Amazon Alexa and Google Home are gaining usage. Most smart products that are currently available require a hub, gateway or bridge to operate. Nedis SmartLife™ is different - it requires no technical know-how or additional hardware. It simply connects wirelessly to your broadband network at home – making it simple to set up and easy to use.**

Whether people are looking for a single smart bulb or whether they want to automate an entire home, Nedis can help consumers make it happen. The best part is that the diverse SmartLife product range will expand over time. Keeping up with all the latest possibilities that smart living has to offer.

SmartLife™ is currently available for:

- Lighting
- Observation
- Safety
- Energy

## **One easy application**

A big plus of the Nedis SmartLife concept is the fact that different types of smart solutions are centralized in one app for your smartphone. The free app, that is available on Google Play and in the App store, can be used to create schedules and scenes for the smart

devices or to control a smart home from anywhere. It can also be used to set up the devices automatically depending on the time of day, available light, rain or sunshine.

### **Smart lighting: WiFi LED Bulb**

Control the hue and brightness of your SmartLife™ lightbulbs remotely or automatically. Set the perfect scene for every occasion – whether it's movie night or a romantic dinner. The Smart lightbulb can be used as a stand-alone product or as a part of an extensive smart home.

- WiFi - for an easy set up and control via the smartphone app
- E27, LED - eco-friendly and good-looking
- RGBW - control brightness and colour
- Works with Amazon Alexa and Google Home

### **Keep adding on**

Light switches - are without a doubt the most often used on and off switch. Replace the traditional light switches in your home - with smart wall switches to take automatic or remote control with your smartphone or voice. And, of course, the switches can still be used manually.

Smart plugs - can be used to make any device smart and controllable via the smartphone app. Switch on or off remotely using your phone or voice - or schedule anything, from lighting to cookers and even electric blankets, for whenever suits you best.

And that is not all these plugs can do for you. A handy power monitor enables you to measure the energy consumption of your device, both at the very moment as over time. So you can enjoy an eco-friendly life as well as a smart one.

Nedis SmartLife™ also contains different sensors and cameras. Find out more at [www.nedis.com](http://www.nedis.com)

### **About Nedis**

Nedis has introduced their very own product brand in 2018, self-titled and with a clear new vision for the consumers' electronics market. The company, known for electronics and electronic-related products, has been in business for over 35 years and is putting their experience to an even better use. *'Consumers want easy-to-use electronic appliances and accessories that bring them lasting enjoyment and very good value for money'*, and Nedis will be there to offer this, with Nedis®.
